Alberto Picco Stadium La Spezia - Italy

The Alberto Picco Stadium is the historic Spezia Calcio stadium and has hosted the club's matches since 1919. The stadium is named in memory of Alberto Picco, an Alpine hero who died heroically during the First World War and the Ligurian club's first scorer in the absolute sense. Following the virtuous path of the club, for the first time in its history, the Alberto Picco stadium makes its debut in Serie A under the light of AEC. The Club, in fact, was called upon to adapt the lighting system to meet the parameters set by the main series. An important intervention aimed at redeveloping the stadium through light, with the aim of meeting the requirements of television footage and enhancing the show with dynamic content and plays of light.

Pier Luigi Penzo Stadium Venice - Italy

The Pier Luigi Penzo Stadium in Venice is the second oldest stadium in Italy among those still in use. On the occasion of the promotion in Serie A for the 2021/2022 season, the Penzo stadium has undergone structural adaptation works, energy efficiency and architectural restyling to participate in the maximum series title in good standing. AEC Sport Solutions was chosen as Official Partner of Venezia FC, providing for the supply of the electrical system, audio system, control system and structural reinforcements. The project, carried out in 110 days, allowed the Penzo stadium to host the Venezia matches starting from 19 September 2021.

Other important References in Italy

Renato Dall'Ara Stadium Bologna - Italy

AEC Illuminazione has been chosen as the supplier for the new LED lighting of the Dall'Ara Stadium in Italy. With its efficient 100% Made in Italy floodlights, AEC Illuminazione has brought a new light to another iconic Serie A stadium. The professional ALO series floodlights have guaranteed exceptional lighting quality and high energy efficiency for this renowned stadium located in the heart of Bologna. The Renato Dall'Ara Stadium, inaugurated in 1927, is a symbol of football passion and the history of Bologna. This impressive stadium has hosted many important matches and unforgettable sporting moments over the years.

Cino e Lillo Del Duca Stadium Ascoli Piceno - Italy

Due to the advanced technology of the ALO Series floodlights, AEC was able to ensure uniform light distribution and optimal visibility across the entire pitch, improving the experience for spectators and players. Furthermore, the energy efficiency of AEC floodlights contributes to environmental sustainability, significantly reducing energy consumption. This project was developed to ensure full compliance with regulatory lighting standards, while offering superior light quality. AEC continues to innovate to offer cutting-edge lighting solutions, always keeping quality and compliance with international standards at its core.

Poppi Castle Poppi - Italy

AEC Illuminazione was chosen for the LED redevelopment of the Castello dei Conti Guidi, today Palazzo Pretorio of Poppi, Tuscany. The medieval castle was built between the end of the 12th and the beginning of the 14th century by the noble Guidi family and it is the “youngest” castle of all those built by this powerful family in the area. The original nucleus of the castle consists of the 45m square tower which still today dominates the rest of the building and the whole valley. The current appearance, however, is not the primitive one, in fact in the 19th century the tower was transformed, during the restoration work, into a bell tower.

TORRES PORT Porto Torres - Italy

Located in the North West of Sardinia, it is the second largest port on the island in order of passengers and goods. Considered a multipurpose port, it is divided into three areas: the civic port (in turn divided into Ponente docks, Dogana Segni quay and Alti Fondali quay), intended for passenger and freight ships and pleasure craft; the industrial port (consisting of two docks that can be used for ferries, cruises, solid cargoes and one for liquids), and a terminal, on the breakwater, until a few years ago intended for the traffic of solid fuels and liquids.
